1) Since Sec 328 of the Clean Air Act carves out the western/central Gulf of Mexico from EPA's permit jurisdiction and assigns it to MMS, we shouldn't have a lot to report.

2) Here is the chart of LNG terminals (onshore and offshore) that I have kept. It is up to date as of mid January.

US LNG Terminals.xls

3) It is potentially an issue that Region 6 did not issue an air permit to the LOOP facility back in the late 70s. But Myron, who was the division director back then for permitting and NEPA, told me that he hadn't thought about air issues. Back we will be looking at them with the TOPS facility.

Subject Urgent Question on Prior OCS Permits in Your Region 📎

Permits APM's;

As we are working on permitting oil and gas facilities on the Outer Continental Shelf (OCS), Region 10 is trying to identify past permitting precedents. Specifically, we are interested in prior permits for OCS sources located in the "outer" OCS - i.e. located 28 miles or more from shore. My questions are as follow:

1. Has your region issued any air quality permits (draft or final) for a facility located on the "outer" OCS?
2. If a permit was issued, please provide the name of the permittee, type of permit (e.g. PSD), whether draft or final, type of facility, and date of permit.
3. If a permit was issued, please indicate how the permit addressed PSD increments (and for which pollutants)

We are in a time crunch to address this issue and would very much appreciate a response by COB Wednesday. Please copy Pat Nair and Julie Vergeront on your responses.

Thanks!
